This document outlines changes, developments and bug fixes that have been applied to the Micad FM Assets Module since the release candidate.

Latest release details of the software:
Version = v1.0.25523
Date = 13/05/2024

Contents

Developments and changes
v1.0.2

Configuration/Admin

#13805. Since the release candidate now under the menu Configuration there are tiles for each of the configurable elements within the assets module. You are required to have the permission Assets Administrator for these and user guide for each section can be found under the Help menu item.

#13928. You can now configure the starting number for an assets ALTREF details of which can be found in the user guides.

Asset Register

#13920. You can now make changes to field en masse from the main asset grid. Details of which can be found in the user guides.

#13926. Any custom fields created can now be added as columns to a view within the grid.

v1.0.25523

Configuration/Admin

#RES-148. Configuration added to default to display the ALT Ref rather than the system generated asset id. ALT Ref has also been added as a separate column to the default view.

Bug fixes and improvements
v1.0.2

#14786. There was an issue preventing the total counts of assets not displaying correctly when a filter was applied. This is now working as intended.

#14789. When searching for assets to add to a group, the grid was only showing those assets not already in a group. Now you can see all individual assets and they can belong to more than one group.

#14790. If you tried to access Assets without the correct permissions you were stuck in the software and could not log out. A log out button is now provided.

#14858. Mandatory fields could be saved by entering a single space. Validation has now been added here preventing this.

---

v1.0.25523

#RES-144. Changed the sort order of the drop down fields to display in alphabetical order

#RES-159. Fixed an issue preventing documents being uploaded and location images (360, floor plans) not working.

#RES-171. Added and fixed what documents types can be uploaded to match legacy FM.
